

SEWING LAYOUT, SIMPLIFIED

Sewing-pattern- layout Studio

From sewing-pattern pieces to a fabric-efficient cutting plan

Cynthia & Steven
2026.8.2

Before the first stitch, five manual steps

The work begins long before sewing.

1 DRAW
pattern

2 CUT
paper

3 NEST
on fabric

4 TRACE
outlines

5 CUT
fabric

Only then can sewing begin.

The preparation is the real bottleneck

Professionals lose material. Beginners lose momentum.

FOR PROFESSIONALS

The cost of complexity

- 1 **Slow nesting** a manual geometric puzzle
- 2 **15–30% waste** expensive fabric becomes scraps
- 3 **Alignment failure** one mismatch can ruin the piece

FOR BEGINNERS

The barrier to entry

- 1 **Skill wall** darts, allowances, notches
- 2 **Too many decisions** math, tools, dense tutorials
- 3 **Early frustration** the joy disappears before sewing

Same preparation. Two different losses.

What Nest & Cut does

Turn one scanned pattern sheet into a practical cutting plan.

Patterned fabric: repeat · direction · connected-edge matching

Live Demo — For Professionals: Nest & Cut

Sewing pattern layout

Patterned layout · First complete version

EN 中文

SEWING LAYOUT WORKSPACE

Prepare your pattern pieces.
One step at a time.

Start with the fabric size, then upload one complete sewing sheet. Check each irregular piece before planning the cut.

1 Upload sewing pieces

2 Check the outlines

3 Plan the layout

01 · START HERE

What kind of fabric are you using?

Try both options. The preview will change with your choice.

Plain fabric
Solid or no pattern matching

Patterned fabric
Stripes, checks, flowers or prints

The sewing-piece sheet and fabric print use separate uploads. In Patterned fabric mode, the fabric-print upload appears directly below.

Selected: Plain fabric mode

Layout preview

PLAIN FABRIC MODE

Place pieces efficiently

The layout arranges real irregular outlines while respecting seam allowance, quantity and rotation.

Live Demo — From Words to Pattern

- Type a description + choose a height
- AI drafts the design → a 3D model is generated
- Preview and accept it (or regenerate with edits)
- Get 2D pattern pieces + a printable A4 PDF

What's Next

-
- Paper size input is still manual — needs smart presets (A4 / Letter / roll widths)
 - The UI flow is long — needs a smoother, more guided experience
 - More garment shapes & fabric types
 - A Nest & Cut layout optimizer for professionals

-
- reject unsafe geometry correctly; the next challenge is making real generated meshes pass
 - Geometry validation reduces risk; it does not replace a physical sewing test
 - Other kinds of fabric is not available, the generation maybe stopped
 - Flattening algorithm needs further improvements. Formal PDF export is blocked due to high flattening distortion

Thank You
